 ~ 2 (8.23) To be safe it is required that true average viscosity of some material exceed 30. Based on a sample of size 9, the sample mean and standard deviation are 28, and 3, respectively. Is the material safe at $\alpha = 0.05$? Clearly state the hypotheses in terms of well-defined quantities, report the p-value, and state the conclusion in "English".

Ho:
$$\mu \le 30$$
 $\mu = true near viscosity.$

Hi: $\mu > 30$
 $tobs = \frac{28 - 30}{3/(9)} = \frac{-2}{1} = -2$
 $tobs = -2$

 ~ 2 We are testing $H_0: \mu \geq \mu_0$ vs. $H_1: \mu \in \mu_0$, at $\alpha = 0.05$. On the shown normal distribution

- a) Label the x-axis $\overline{\times}$ (or $\overline{}$ or $\overline{}$)
- b) Shade the appropriate area corresponding to α
- c) Revise the diagram (or make a new one), clearly shading the area corresponding to β .

with
$$H_1: \mu < \mu_0$$

p-value= $pvob(\bar{x} < \bar{x}_{ob})$

i. $\alpha = (eft - avea$

Predict the mean value of y(x) when x = 4, in a way that conveys reliability and precision, at 95% confidence level. HINT: recall what we did in class when we didn't

	1 1 . 2			
X	0.2	(1.0)	0.2	0.846
Constant	0.6	0.2	3.0	0.017
Predictor	Coef	StDev	\mathbf{T}	p

have S_{xx} . Use $t^* = 2.3$, and $\sqrt{1.1} = 1.05$.

C.I. for mean y(x):	
7(4) ± + 5e / + (x-2)2 5xx	\
$[0.6+(0.2)4]\pm(2.3)(2)$	+ (4-2)2
1.4 ± (2.3) (2) \(\frac{1}{10} + 1 \)	

$$\frac{1}{\sqrt{11}} = 1.05$$
Hint $S_{\hat{\beta}} = \frac{1}{\sqrt{S_{xx}}} \Rightarrow 1.0 = \frac{1}{\sqrt{S_{xx}}}$

$$\frac{1}{\sqrt{S_{xx}}} = \frac{1}{\sqrt{S_{xx}}} \Rightarrow \frac{1$$

(1.4 ± (2+3)(27(1.05))

 ~ 2 b) What is the probability that the estimation error will exceed 2.10?

$$prob(est. ew. > 2.10) = prob(\frac{est. ew.}{5} > \frac{2.10}{5})$$

$$standardizc \qquad df=n-2=8$$

$$= prob(t > \frac{2.1}{2.1}) = prob(t>1) = [173]$$

 ~ 2 c) What is the probability that the prediction error will exceed 2.53? Hint: $\sqrt{2.1^2 + 2.0^2} = 2.53$

$$Pvob(pved.evv. > 2.53) = pvob(\frac{pved.evv}{5pved.evv} > \frac{2.53}{\sqrt{5_1^2 + 5_2^2}})$$

$$= pvob(+ > \frac{2.53}{\sqrt{2.1^2 + 2^2}}) = pvob(+>1) = .173$$
